

We must try to find the most efficient method: $6000 - 2473$...

$$3000 + 500 + 27 = 3527$$

	Th	H	T	O
	5	9	9	1
	6	0	0	0
-	2	4	7	3
	3	5	2	7

	Th	H	T	O
	5	9	9	9
-	2	4	7	2
	3	5	2	7

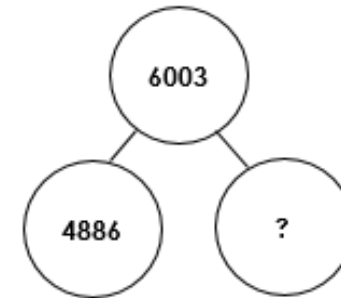

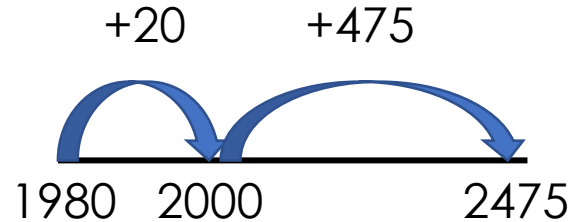

Just subtract 1 from each

VOCABULARY

- efficient method
- strategy
- calculate
- partition
- find the difference
- take away
- estimate
- check answer

	2475
?	1980

Finding the difference by counting on would be most efficient here

6003 - 4886

	Th	H	T	O
	5	9	9	9
-	4	8	8	2
	1	1	1	7

Subtract 4 from each ones digit

Estimating the answer before you do the calculation gives you an idea if the answer is reasonable

$$7293 - 378 \xrightarrow{\text{(rounded to nearest 100)}} 7300 - 400$$

Estimate = 6900

Actual = 6915

These numbers are related...

$$7293 - 6915 = 378$$

$$7293 - 378 = 6915$$

$$378 + 6915 = 7293$$

$$6915 + 378 = 7293$$

	7293
6915	378

$$378 = 7293 - 6915$$

$$6915 = 7293 - 378$$

$$7293 = 378 + 6915$$

$$7293 = 6915 + 378$$
